The muscle to

keep life moving™

We are fearless innovators united by a shared mission:

to bring transformative therapies to people living with serious muscle diseases.

We are committed to listening to and learning from the communities that we hope to serve – including individuals and families living with myotonic dystrophy type 1 (DM1), Duchenne muscular dystrophy (DMD) and facioscapulohumeral muscular dystrophy (FSHD). Their stories inspire us and provide insights and information about disease burden and meaningful benefit that we know is critical to developing transformative therapies.
